

Problem Statement: -

Make a web platform that can take a file upload. use professional website design for this i.e. design and develop it in such a way that it is responsive over most of your devices with professional look.

File Upload criteria: -

- 1) File should be a PDF only.
- 2) File shouldn't be greater than 20 mb.

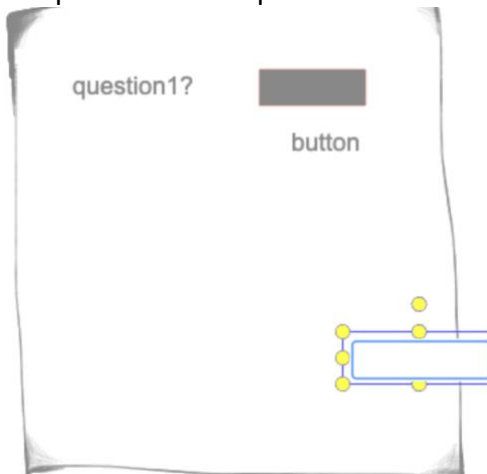

It should give a validation on the UI itself if the above criteria doesn't satisfies

Once the file is proper upload it on the database (you can choose whichever Databases you want for eg:- mongo db, my SQL, etc.)

After the file is uploaded successfully provide a generator button that provides some an answer (can be any random text) once it clicks the button, with subtle required animations if necessary below is the look alike which is expected

(in the image its only one question and a button but when you make it keep multiple question with buttons respectively and once you press the button it should generate some random text Pro Tip:- you can use proper animations to make it look better)

Also as you can see the below mirror where the there will be a question besides a button and as soon as the button is pressed the an answer to that question should appear, similarly 3-4 questions are expected.

Deadline:- 19-FEB-24 11:59 p.m
